

Amendments to the Specification:

Please replace paragraph 40 with the following amended paragraph:

[40] Any suitable programming language can be used. For example procedural, functional, imperative or object-oriented can be adopted. The steps can be performed serially or may overlap concurrently. The methods and aspects of the present invention can be practiced in a general-purpose computing environment or with distributed, embedded or co-processing architectures. Aspects of the invention need not be embodied in re-programmable computer readable media. Steps or functions described herein can be performed in hardware, software or a combination of the two. For example, hardware design can include application-specific integrated circuits (ASICs), field-programmable gate arrays (FPGAs), custom or semi-custom designs, discrete logic etc.
